

PRESS RELEASE

Schedio, Buchiglas USA Corp., and Microsize Partner to Expand GMP Particle Size Engineering and Containment Systems Distribution to the US Market.

Buchiglas USA Corp. as a partner and official distributor for the US & Canadian markets for Schedio's particle size engineering and containment systems technology, as well as for the local aftersales program support.

Microsize as a preferred CDMO partner in the US market for GMP particle size engineering services, on-sitetrials, and technical process support for Schedio equipment.

Schedio as preferred partner and official supplier for the US market for Buchiglas USA Corp. and Microsize for the particle size engineering and containment systems technology, as well as for the Aftersales Program that includes spare parts supply and process support.

Today, Schedio SA, in collaboration with Buchiglas USA Corp. and Microsize, officially announce a strategic partnership to integrate GMP particle size engineering and containment systems technology distribution to the US market. This collaboration will allow a more efficient presence in the US market of Schedio innovative solutions. In addition, by combining Schedio machinery with the analytical characterization and CDMO services offered by Microsize, we can provide our customers with a wide and complete range of support to meet all their needs for the particle characterization of API and HPAPI in a GMP environment.

The partnership was established Buchiglas USA Corp. as the official distributor for the US market for Schedio products that include the management of the Aftersales Program and Customer Support. Present on the US & Canadian market for many years as a provider of engineering solutions for the pharmaceutical industry, Buchiglas USA Corp's proven competence in this area and professionalism are an additional guarantee for the high-quality services we can provide.

The collaboration with Microsize integrates the particle size engineering service in the US market. It gives our clients the possibility to do either feasibility test trials of the customer product during the development phase of their equipment or perform a full DOE process capability assessments combined with a comprehensive suite of solid state analytical characterization capabilities as the client prefers. The use of Schedio technologies on the Microsize site allows an easier scale-up or scale-down of the customer process during production, as well as a backup service for micronization.

The proven experience of Buchiglas USA Corp. and Microsize together with the technologies provided by Schedio, is a winning combination for the best equipment provider and service support for the GMP particle size engineering and containment systems on the US market.

ABOUT SCHEDIO

Schedio was born from a group of passionate and experienced specialists from the pharmaceutical industry who launched the company and created something new and unique established on specific core values and commitments including equality and diversity, work-life balance, entrepreneurship, and continuous learning, among others.

The company delivers world-class fully tailored equipment for bioavailability enhancement, and

operator/product protection in combination with outstanding machine and process support, with a strong commitment to simplicity and safety standards, which go above and beyond the normal industry regulations.

The lifeblood of Schedio is focused on having a partnership approach with our customers, where we believe in the power of working together focused on long-term relationships and in making a real difference to your business.

ABOUT BUCHIGLAS USA CORP.

Buchiglas USA Corp. is a distribution and service company offering reactor systems, pilot plants and other process solutions to the pharmaceutical and chemical industries as well as to research organizations. The company serves customers in USA, Canada and Mexico. Buchiglas USA Corp. only supplies equipment from partners which are globally recognized as technological leaders in their field and second to none in terms of quality, safety, reliability and innovation.

Thanks to the vast experience of its team executing technologically challenging projects in highly regulated industries, Buchiglas USA Corp. is the preferred partner. Buchiglas USA Corp. supports its customers throughout the entire life cycle of their project, from basic design and engineering through manufacturing and installation to after-sales services and plant-optimization. Visit us at www.buchiglas-usa.com for more information.

ABOUT MICROSIZE

For over 30 years, Microsize has been a pioneer in enhancing dissolution and bioavailability of Active Pharmaceutical Ingredients (API's) and functional excipients via particle size reduction technologies including micronization. Operating from 100,000 square feet in US-based, state-of-the-art, FDA-inspected GMP facilities, Microsize has the experience and capabilities

to rapidly develop, scale up, and process API's and excipients ranging from grams to multi-metric tons, including highly potent compounds ("HPAPI's"). Microsize is THE partner of choice from small biotechs to big pharma to CDMO's, and is recognized for its speed, responsiveness, and high customer-touch business model.
